

PART 1

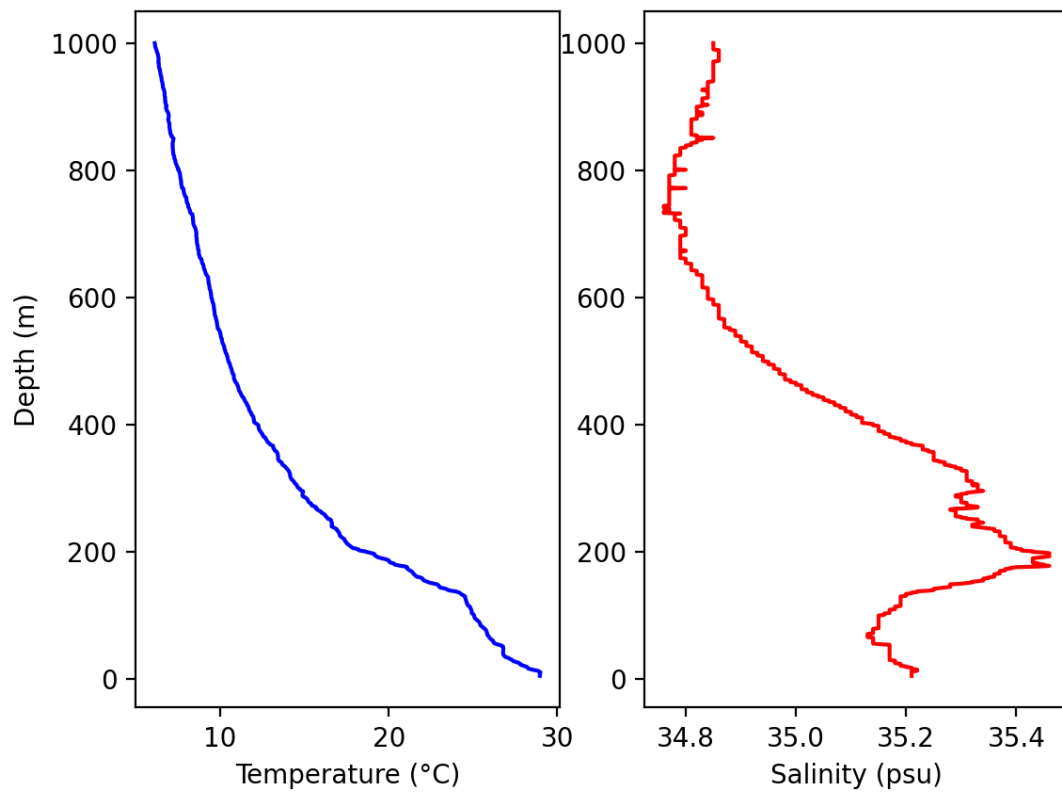

Figure 1. Oceanographic CTD data collected in November 2008 providing insights into the variations in temperature (°C) and salinity (psu) in relation to depth (m).

PART 2

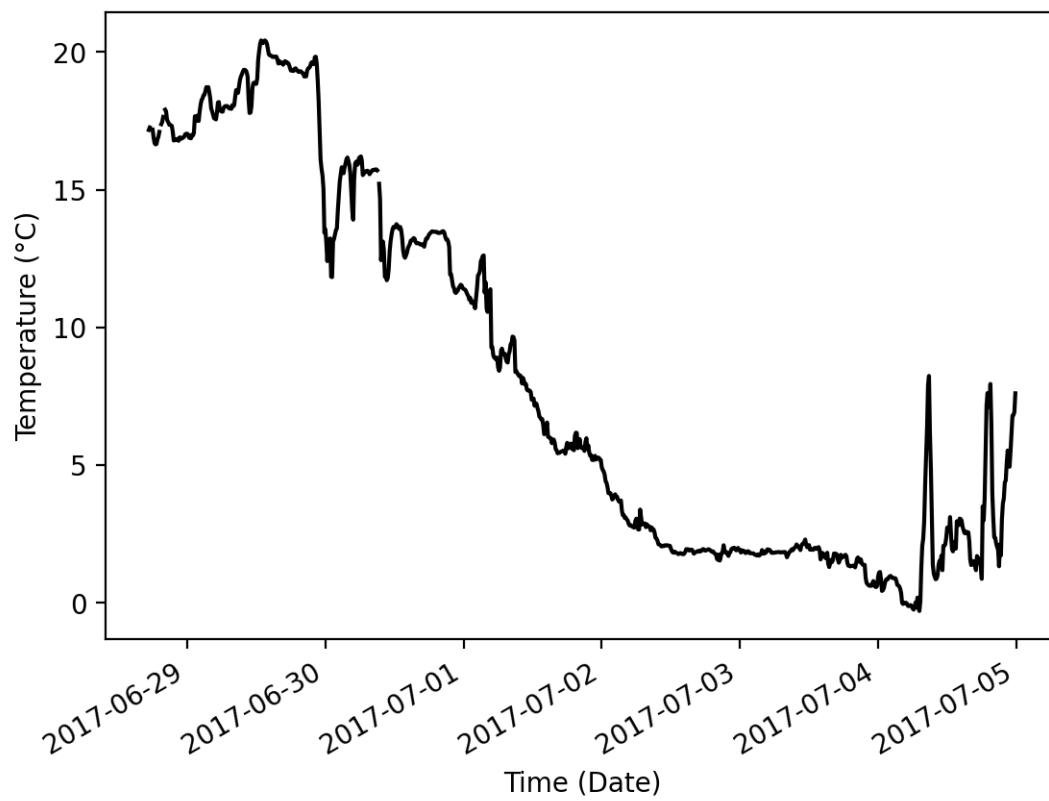

Figure 2: Oceanographic data collected during the 2017 research expedition aboard the SA Agulhas II in the Southern Ocean, illustrating the temporal variations in temperature (°C) over the duration of the expedition.

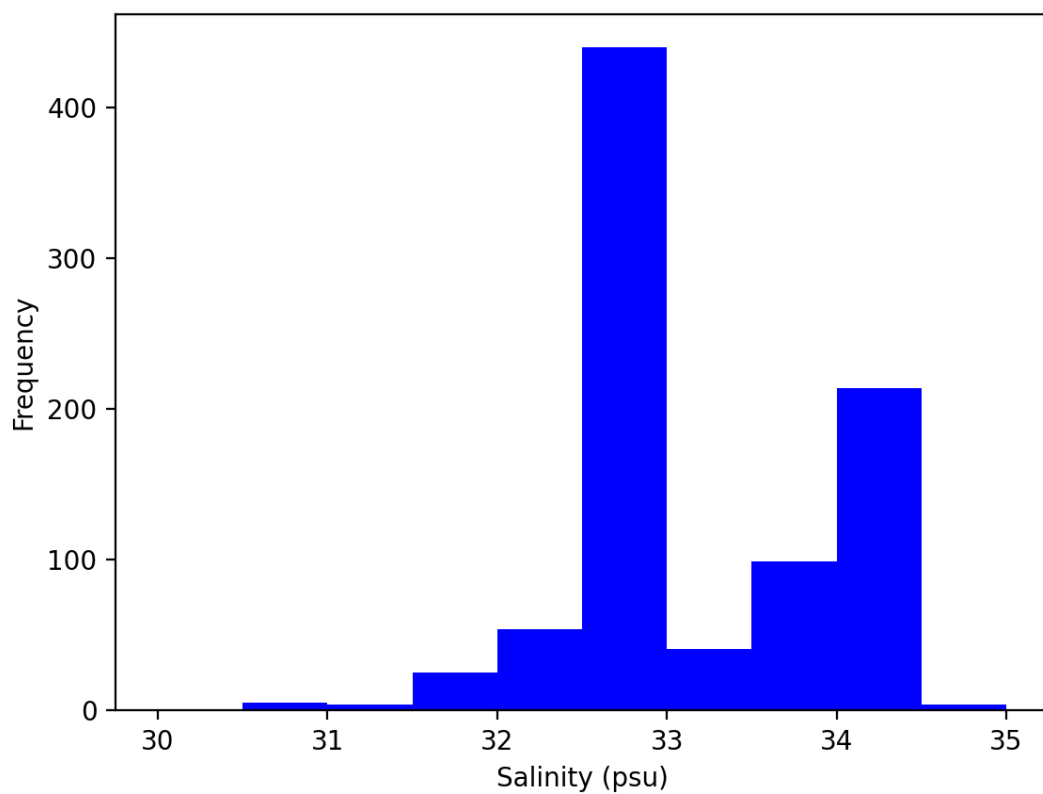

Figure 3: Depiction of the frequency distribution of data collected across various salinity (psu) ranges during the 2017 research expedition aboard the SA Agulhas II in the Southern Ocean.

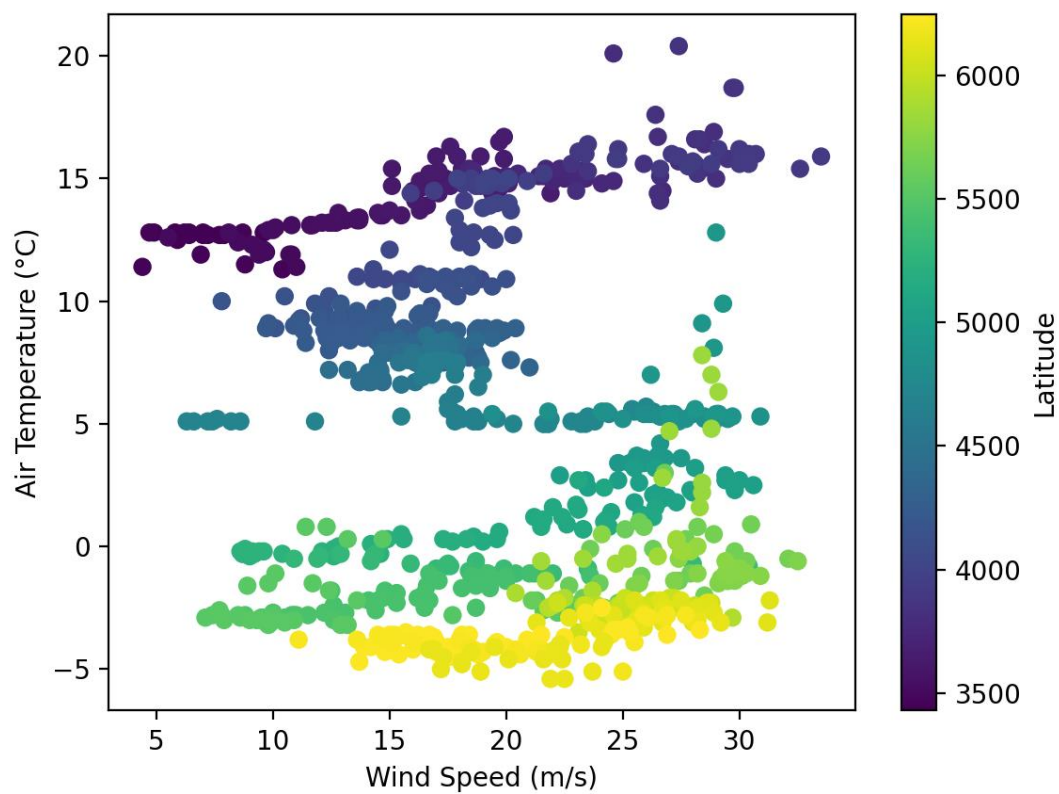

Figure 4: Oceanographic data collected during the 2017 research expedition aboard the SA Agulhas II in the Southern Ocean, providing insights into the relationship between air temperature (°C) and wind speed (m/s) in association with latitude.
